reliability**

Brake Pad Spray: Cleans disc and drum brakes, clutch parts, surfaces to be glued and sealed from pad dusts, dirty oils, grease and dirt. Material compatibility is highly efficient. Does not contain silicon.

LUBE BC 500ml.

Rust Remover: Cleans very thick grease layers and dirt, label and residual glue from the surface by not containing any abrasive material. In addition to this, obtained film layer prevents decomposition and rust. RR-40 allows lubricant in its content to spread to the entire surface and stick to moving parts efficiently with its high gravitational force. RR-40 does not contain any additive dirt collector material or silicon. Therefore, it does not create dirt layer on the surface.

LUBE RR-40 200ml.

Liquid Grease: It is used to lubricate housing, door hinge and bolts, gears, rails and all the parts which are exposed to impact and swing. It provides easy operation conditions in drilling and cutting process. It does not unite with water and does push water away. It is a product which has structure to work under heavy loads and high temperatures. It leaks into the narrowest areas and holds its position with its high leakage and holding features. Acts as a filler material for pin bolts. It is transparent, lubricants permanently and does not pour and drip. It does not contain carcinogen.

LUBE LQ 400ml.
